

SPECIAL NOTICE March 2021:-

Recently, Dr Clo's products are heatedly discussed by the public. Few individuals have taken it out of context, and they have maliciously discredited Dr Clo's products on social media, causing serious damage to our reputation and distort the facts of safety and efficacy of our product. We are now contemplating legal action against these defamatory statements.

Some consumers are misled by some remarks thus forming negative perception and fears about our products without fully reviewing all the test reports.

Product introduction

Trusted Global brand for six years

Dr Clo has a breakthrough nanotechnology filter invention with a gel based Chlorine Dioxide formulae. Six years ago, it obtained a global Patent award for this achievement.

Safe for usage based on WHO guidelines

Chlorine Dioxide emission through this patented design can release averagely a low and stable 0.02ppm of Chlorine Dioxide, which is far lower than the World Health Organization (WHO) guidelines of 0.1ppm usage for human. WHO guidelines of safe usage are meant for **human of all ages**. There is no doubt that Dr Clo is a safe device.

General chlorine dioxide in liquid-based form chemical is unstable and decompose quickly hence emission safety and efficacy is questionable but this is not the case for Dr Clo's superior technology.

Dr Clo invention of gel based Chlorine Dioxide can achieve long-lasting stability of emissions and our product has different formulae (cater different environment usage such as "bathroom range" for high humidity area, "automobile range" to withstand higher temperature up to 80 Celcius)

Proven certification and lab reports

The efficacy of the device in killing bacteria & viruses, purify air, remove harmful gas and fungi is supported by many lab reports and certifications.

How to use Dr Clo –

Dr Clo is light and portable. It can be used everywhere in many different environments. It sanitises the air and surface.

For instance, you can use to disinfect your car, or bring it to the restaurant, office etc.

Safety -

World Health Organization, universal guideline for chlorine dioxide exposure is 0.1ppm concentration as safe for human of all ages. In order to avoid long-term exposure that may cause side effects, it is recommended that exposure should not exceed 8 hours per day at time weighted average. However Dr Clo emission of only 0.02ppm averagely is lower concentration and much safer.

Dr Clo safety is awarded the **EU ROHS certificate** for Hazardous Substances compliance.

Dr Clo also tested within compliance of **EU Chemical Registration, Evaluation, Authorization and Restriction Organization (EU REACH) guidelines**. It is certified that the product is free of carcinogens and harmful substances.

Dr Clo product is covered with Samsung Fire & Marine Insurance's global product liability insurance.

Dr Clo products have been sold in over 30 countries globally including Korea, Japan, USA, UK, Spain, France, Germany and UAE since 2016 and its effectiveness and safety have long been recognized and trusted by a wide range of users from consumers to international institutions.

Validity -

Dr Clo has done the most laboratory tests for any kind of disinfectant, including fungi, bacteria, virus, harmful substances, purifying test.

More laboratory report test of killing virus in gas chamber will be published on our official website in the near future.

US FDA registration -

Dr Clo products is classified as first-class medical device. It doesn't require approval as a general disinfectant. It only requires to prove that the product is harmless to human in order to gain registration.

In order to register as a medical device product in Malaysia, it needs to be reviewed by several relevant departments such as

- Registration with the Drug Administration (MDA)
- Registration with the Drug Administration (NPRA)
- Product advertisements need to be approved by the Pharmaceutical Advertising Committee (KKLIU)

According to the standards reviewed in Malaysia, Dr Clo is classified as a disinfectant product, which is classified as general consumer products hence there is no requirement to register with the above relevant departments.

All Dr Clo application are completed in accordance with Malaysia law.

The reference number in MDA is MDAPC 2020351.

For critics who have misunderstood Dr Clo products, please refer to Dr Clo related safety report in full to avoid misleading the public due to lack of understanding.

For some merchants who purchase Dr Clo products for sale, the misrepresentation of the features of Dr Clo products in the promotion process needs to be corrected, and merchants need to learn more about the products.

For users who want to learn more about Dr Clo products, please refer to Dr Clo's certification report or ask more professionals such as pharmacy shops to avoid misunderstanding.

Please be reminded to continue with good hands hygiene, wear mask, practice social distancing, even after using Dr Clo.

At the same time, Dr Clo Malaysia also encourages the public to participate actively in Malaysian government vaccination program.

Dr Clo is committed to protect you and your family with our odorless and portable features of killing bacteria and virus.
